

LECTURES ON LINEAR ALGEBRA WITH APPLICATIONS MATHEMATICS 2

This pedagogical book consists of lectures in the course Mathematics 2, which includes lessons in mathematical algebra, in accordance with the new ministerial program for Mathematics 2. It is intended for first year students in the common core (LMD system) of the Faculty of Economic Sciences, Commercial Sciences, and Management Sciences. These lectures have been written in a simple manner and in a style that suits students, with a focus on simplifying concepts through numerous examples and solved exercises, enabling the student to practice and develop their skills.

Lectures on Linear Algebra with Applications Mathematics 2 Dr. Saigh Malika

PEDAGOGICAL BOOK

LECTURES ON LINEAR ALGEBRA WITH APPLICATIONS MATHEMATICS 2

**AUTHORED BY:
D. SAIGH MALIKA**

Table of Contents :

<u>Page</u>	<u>Title</u>
2	Table of Contents
4	Introduction
5	Chapter I: Differential equations
5	1- Definition of a differential equation
6	2- Homogeneity and linearity of the differential equation
6	3- Definition of a first order differential equation
7	4- Separable differential equations and methods of solving them
10	5- Second order differential equations with a positive or zero discriminant
14	6- Suggested exercises for chapter I
14	7- Solutions to the suggested exercises
21	Chapter II: functions of two variables
21	1- Definition of a function of two variables
21	2- Domain of a function of two variables
22	3- First order partial derivatives
23	4- Second order partial derivatives
26	5- Suggested exercises for chapter II
26	6- Solutions to the suggested exercises
29	Chapter III: Matrices and their operations
29	1- Definition of a matrix
30	2- Transpose of a matrix and its properties
31	3- Types of matrices
36	4- Basic operations on matrices

56	5- Suggested exercises for chapter III
56	6- Solutions to the suggested exercises
61	Chapter IV: Determinant and inverse of a matrix
61	1- Definition of the determinant of a matrix
61	2- Second order determinants
62	3- Determinant of a third order matrix (Sarrus' rule, cofactor expansion method)
68	4- Properties of determinants
74	5- Definition of the inverse of a matrix
76	6- Finding the inverse using the adjoint matrix method
81	7- Finding the inverse using Gaussian elimination
85	8- Properties of the inverse
86	9- Suggested exercises for chapter IV
86	10- Solutions to the suggested exercises
94	Chapter V: Solving systems of linear equations
94	1- Definition of a system of linear equations
95	2- Writing the system of equations in matrix form
102	3- Solving a system of linear equations using Cramer's rule
109	4- Solving a system of linear equations using the inverse matrix method
115	5- Solving a system of linear equations using Gaussian elimination
133	6- Suggested exercises for chapter V
133	7- Solutions to the suggested exercises
145	Bibliography
